

Supplying Fire Suppression Trailers for Water Corporation

INTRODUCTION

Water Corporation needed a fleet of fire suppression trailers to ensure critical maintenance works could continue safely during Total Fire Ban periods. Coerco partnered with them to deliver a purpose-built solution that combined engineering precision, compliance with Australian Standards, and long-term reliability.

THE REQUIREMENT

Water Corporation required 15 mobile fire suppression trailers, each carrying a 1500L baffled tank and specialist safety equipment. These units needed to support hot works across WA operations, meet strict compliance standards, and include extended warranty cover.

THE OUTCOME

Compliance Assurance

Supplied with roadworthy certification, QA pack and engineering sign off, aligning to the client's internal governance and documentation needs.

Safety Integration

Each unit includes a 1500L baffled tank, diesel pump, twin hose reels and on board storage for welding screens and mats to support safe hot works.

Long Term Reliability

Backed by a seven year structural warranty with service support from Coerco's WA based team.

The fire suppression trailers were delivered to specification with full compliance documentation and warranty support, providing confidence for safe operations during fire bans.
