

COERCO: CONTRIBUTING TO THE SEPON MINE LEGACY

Client Profile

Sepon Mine, an open-cut copper and gold mine located in the Savannakhet Province of Southern Laos, planned to increase its copper cathode output of 62,941 tonnes, from 10% to 20%.

The Problem

Increasing mining productivity demands fit-for-purpose products made of high-quality materials delivered within time constraints. The Sepon mining operations had several past encounters where products were not made up to standard – costing critical time and money.

The Solution

To avoid the risk of product failure, the Sepon mine looked for more reliable and high-quality products from international companies for hose cable floats which would be utilised during their mining operations. Within eight weeks, Coerco successfully manufactured and delivered carefully packed 992 Multi Float® Hose Floats to Southern Laos.

Summary

Location

Vilabouly, Savannakhet Province of Southern Laos
